

Fifth International
Scientific School for
Young Scientists

Waves and vortices in complex media

Moscow
November 25 – 28, 2014

Conference venue is A. Ishlinsky Institute for
Problems in mechanics of the RAS (IPMech RAS)

Moscow 119526,101 (1) prospect Vernadskogo,

INVITATION TO PARTICIPATE

Organizers

Federal Budget Institutions of the Russian
Academy of Sciences:

A. Ishlinsky Institute for Problems in
Mechanics

V. Steklov Mathematical Institute

INFORMATION FOR PARTICIPANTS

Conference languages: Russian and English
Participants present electronic version of the:

- **Registration form;**

- **Presentation materials** prepared in MS Word,
12 pt, up to 3 pages framed by 16×24 cm. **TITLE
OF THE PRESENTATION**, authors' names and
addresses prepared as per sample given at school
website.

Conference information package will be distributed
at the registration.

The conference program provides lectures (30
min), oral presentations (extended -15 min, short
5 min), and discussion sections on which all the
participants will have opportunities to present the
materials on the PC's for concurrent discussions.
Conference rooms are equipped with blackboards,
screens, slide- and video-projectors.

KEY DATES

Registration form and presentation materials
before 1st October 2014

Author notification on acceptance

before 10th October 2014

REGISTRATION FEE

Regular participant fee is 2000 rub.

The fee can be paid in cash at the registration
desk or by bank transfer order.

Requisites are available on request.

Registration fee is cancelled for young scientists
and research scientists involved in the 13 OE
DEMBMCP RAS Program.

ACCOMMODATION

Participants accommodate in hotels on their own
booking (booking.com).

SCIENTIFIC PROGRAM

- **Fundamental equations and constitutive models of flows of complex media;**
- **Methods of mathematical and laboratory modeling of complex media;**
- **Modern experimental technique and equipment;**
- **Waves, vortices, coherent structures and turbulence;**
- **Mechanics of inhomogeneous liquids, gas-liquid systems and suspensions in superimposed electric and magnetic fields;**
- **Technical and technological applications.**

Papers on similar topics can be included in the
school. Number of papers presented by one
author is not limited.

Lenticularis clouds. Rocky Mountains, Boulder, Co, November 12, 2012

REGISTRATION

Registration will take place in the IPMech RAS
(room 253) starting from 24th November 2014

INTERNATIONAL PROGRAM COMMITTEE

T.O. Chaplina (sc. secr.), Prof. Yu.D. Chashechkin (dep. Chair.), Corr.-m. RAS D.A. Gubaidulin (dep. Chair), Ac. V.M. Fomin, Corr.-m. Ukraine NAS V.I. Nikishov, Prof. Ph. Fraunie (Fr), Ac. A.G. Kulikovskiy (Chair), Prof. A.F. Pshenichnikov, Corr.-m. RAS V.V. Pukhnachev, Prof. V.M. Somsikov (Kaz), Prof. C.F. Urmacheev, Prof. Yu.G. Yanovsky.

Spinning of filaments from dye sport in compound vortex

GENERAL INFORMATION

Update technology of contact and remote sensing, development and improvement of mathematics and computing have opened up new opportunities to study the waves and vortices - key components of currents, which play a dominant role in the dynamics of natural and industrial systems, and form the basis of a number of high-performance technologies.

Their study is of interest to a number of related disciplines, such as chemistry, biology, pharmacy, which involves the transport processes and the redistribution of the matter.

Not only processes have been complicated, but the investigated media, usually multi-phase, multi-component, and stratified. Development of new approaches, a vast flow of experimental data contributed to the development of theoretical fluid dynamics, which, in turn, demands depth requirements for methods and techniques of hydrodynamic experiments. Solving the scientific problems will improve the description, specification and development of the forecast of new management trends in natural systems and processes.

HOW TO GET

1. Metro Station "Yugo-Zapadnaya". The exit from the last subway car. Then walk about 10 minutes to IPMech RAS.

2. Bus 668 or trolleybus 34 to "MIREA" stop.

Fifth International Scientific School for Young Scientists

Waves and vortices in complex media

SPONSORS

Russian Academy of Sciences

Russia Foundation for Basic Research

Forthcoming school prolongs a series of seminars and schools dedicated to discuss scientific results on the Program "Waves and vortices in complex media" by the DEMbMCP RAS in frame of actual problems of theoretical and experimental fluid mechanics, taken place in IPMech RAS in 2010, 2011, 2012, IAM RAS (2013)/

To participate in the school are invited scholars of all specializations: experimentalists, theoreticians (both analytic and numeric) and mathematicians. Lectures are delivered by well-known experts in the key branches of mechanics and mathematics, as well as young scientists, making deep original research.

Support for the organization provided by sponsors allowed to cancel the registration fee for part of participants.

The program of the school includes plenary oral and seminar presentations.

Proceedings of the school will be published.
